ABOUT OUR SYSTEM

The Enforcement Management System an information system used for maintaining detailed records of road offenders. It is also comprehensively used to track or map offenses, assist in dispatching and investigations, allocate resources, comprehensively manage cases and complaints, and share data and information.

The Enforcement Management System includes modules for receiving notice books, issuing them out to inspectors, inspection of vehicles on the road, issuing fines and court summons to offenders, managing payments from offenders, managing complaints and giving regular feedback to complainants and managing investigations of complaints and any irregularities.

It also keeps a database of road accidents. The system is fully equipped with various analysis capabilities, it has a web based database which can be accessed anytime; anywhere and provides real time statistical reporting in various formats.

A fundamental component of the Enforcement Management System is ability to regularly capture relevant data and make it broadly available to authorized users in a timely and secure manner.

ENFORCER MODULES

ALLOCATION OF BOOKS TO INSPECTORS

This module manages the reception of books and allocation of books to inspectors, also re-issuing and editing of books.

ISSUING OF NOTICES AND COURT SUMMONS TO OFFENDERS

This module manages issuing of notices to offenders and the issuing of J14 to offenders

PAYMENT OF FINES

This module manages the payment of fines by offenders. This information is uploaded from the finance database.

CAPTURING AND TRACKING VEHICLE ACCIDENT HISTORY

This module tracks and manages the vehicles involved in accidents

INVESTIGATION OF COMPLAINTS AND PROVIDING FEEDBACK

This module manages the receipt and investigation of complaints, and ensures feedback is sent to the complainant.

REPORTING

This module is responsible for producing statistical reporting information in various formats when required.
